

V4 double bubble

Skidmarx double bubble screen for Aprilia RSV4 and Factory models

For Immediate Release February 26, 2010

Producing a claimed 180bhp and 85ftlb of torque from its 1000cc V4 motor, the Aprilia RSV4 delivers “searing performance” so owners will welcome the additional protection from buffeting at high speed provided by a Skidmarx double bubble screen.

Proven to enhance the aerodynamics of motorcycles and increase the air pocket behind the screen, Skidmarx double bubble screens have been developed on track and were used by the 2009 championship-winning British Superbike, Superstock and Supersport teams. The version for the Aprilia RSV4 is produced from 3mm acrylic using the same technology as the race screens. No modification is necessary as the Skidmarx double bubble is designed to replace the original factory-fitted item using the existing mounting points and fasteners.

Manufactured by Skidmarx in their UK factory, the double bubble fits both the R and Factory models of the Italian V4 and retails for £49.95 (including VAT) in a choice of clear, light or dark tints. A range of coloured options can be ordered too, selling for £55.95.

Replacement standard screens are also available, in clear, light or dark tints, priced at £39.95. Coloured versions, including red, yellow, bright blue and solid black, sell for £45.95.
